Customer Flow & Queue Management System

Our Queue Management Systems give clients the option of customizing their e-QMS so as to improve their customer flow experience. The system can be configured so that customers can generate ticket numbers from Service Centre touch points, sit and wait comfortably while waiting to be attended to, or online ticketing options to generate tickets from anywhere.

The system prompts first in first out, although it can be automated to suit individual client's unique operations. Customers are called by means of audio, visual signal, SMS and online notifications. With our solution, management is able to evaluate current process identify operational inefficiencies and measure, evaluate and benchmark performance through the use of real time monitoring data and statistical reports.

IMPROVE YOUR CUSTOMER EXPERIENCE AND UPGRADE TO A QMATIC QUEUE MANAGEMENT SYSTEM WITH Eye-D Systems Zambia Limited.

Access Control / Time & Attendance Systems

An Access Control/Time & Attendance is a system which enables an authority to control access to areas and resources in a given physical facility or computer-based information system. In addition, this also helps in tracking the time access areas where accessed and logs a time stump for each access area.

It follows that one cannot achieve security unless there is an access control mechanism to perform such a separation. It protects not only people and the physical assets but the Information as well, which is very important. You need to create a barrier between your Organization and the outside world to achieve security.

Access control / Time & Attendance is simply the means by which movement is explicitly enabled or restricted in some way. Access control can simply be defined as;

"KNOWING WHO GOES WHERE AND WHEN"

**Various Access modes for Access Control / Time & Attendance such as:**

Finger	Cards	Pin	Palm	QR Code

We also offer FACIAL RECOGNITION SOLUTIONS which provides lighting speed hands-free access to offices and restricted areas. By accessing a three-dimensional structure of the user's face, it achieves extremely accurate matching while ensuring high throughput. Access control is highly secure and as simple as a quick glance
